Listing globally installed NPM packages and version

03 Tuesday Sep 2013

tips, tool

I have found myself constantly asking, "Okay, so what npm packages do I have globally installed on this machine again? And what version are they?".

So, instead of Goggling for the answer each and every time. I'm going to put it here. For my own convenience and maybe it will be useful for someone else.

```
npm list -g --depth=0
```

The result will look something like this:

```
C:\Users\paul.redman\AppData\Roaming\npm
├─ bower@1.2.5
├─ generator-angular@0.4.0
├─ generator-karma@0.5.0
├─ grunt-cli@0.1.9
├─ jake@0.5.18
├─ jshint@0.9.1
├─ karma@0.8.7
├─ nodeunit@0.7.4
└─ yo@1.0.4
```

-global worked in cygwin64 windows e.g

npm list -global --depth=0

But -g fails – in cygwin64 – it waits for user input

Why is this not the default!? 😊

How can I then delete all the global packages, essentially so I can restart from scratch. Cheers,

Thanks! Would be great if the npmjs.org docs actually told us this.

I also use this command to find out what packages are outdated in the global space.

`npm -g outdated --depth=0`
