Hjord commented on Nov 28, 2016

I've made a new install of babun, and installed tmux with pact.
But no matter what command I try, nothing happens, at all.
No 'command not found' or anything.

jdriordan commented on Dec 1, 2016

Are you sure `tmux` isn't running? Try running it twice in a row and see if you get an error about nesting.

If you run `md5sum $(which tmux)` do you get

```
2d4f9b841538f452186e523062bf4c14 */usr/bin/tmux
```

?

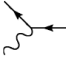

Hjord commented on Dec 1, 2016

I really don't know. Nothing happens. No errors.

When i try that, i get:

```
a4e4dec5c86ac2ca2dbb4c55f204eb07 */usr/bin/tmux
```

jdriordan commented on Dec 1, 2016

Looks like your `tmux` file is different to mine, maybe try uninstalling and reinstalling.

alberdingk-thijm commented on Dec 1, 2016 • edited

I'm getting the same hash. For what it's worth, I'm not seeing anything either but the return code is 127 (entry point not found).
Running `strace tmux` causes an error message to appear on screen declaring that

```
The procedure entry point __locale_ctype_ptr could not be located in the dynamic link library cygwin1.dll
```

and `strace tmux` prints "Process ###, exception c0000139 at 77751976"

edit: running [DependencyWalker](#) identifies the same entry point as being the issue.

```
Error: At least one module has an unresolved import due to a missing export function in an implicitly dependent module.
```

edit2: I uninstalled tmux and removed the archived setup file, then reinstalled. The hash remains the same as before, as does the error.

chanux commented on Dec 1, 2016

I have the same problem. And I updated python and python has the same problem.

WangJing commented on Dec 2, 2016

I have the same problem. Same error code, same file md5sum with @Hjord, same strace result with @alberdingk-thijm

MrFroop commented on Dec 2, 2016

I had the same problem with tmux. But after manually running `<babun installation dir>\update.bat` it worked again. It seems that cygwin got updated in the process, maybe that was what solved the problem? Running `babun update` from the prompt tells me that I'm on cygwin version 1.7.35 but I'm rather sure the `update.bat` said it installed version 2.6.0. Could it be that the `babun update` command is broken?

alberdingk-thijm commented on Dec 2, 2016

Followed @MrFroop's method and it's now working. I am also now on 2.6.0.

Hjord commented on Dec 3, 2016

I also got it working with @MrFroop's method.

chanux commented on Dec 4, 2016 • edited ▼

Confirming the @MrFroop's method, manually running `update.bat` actually fixes my problems. It's probably `babun update` that's broken.

Also when you update be aware whether you are behind a proxy. I had set both `~/.babunrc` and `~/.wgetrc` proxy settings

```
# babunrc additions
export http_proxy=http://<user>:<pass>@proxydomain.localhost:1337/endpoint.ext
export USER_AGENT="Chrome/47.0.2526.111"
```

```
# wgetrc
proxy_user=<user>
```

```
proxy_password=<pass>
http_proxy=http://proxydomain.localhost:1337/endpoint.ext
https_proxy=http://proxydomain.localhost:1337/endpoint.ext
```

ralberts commented on Dec 7, 2016

Running the update.bat worked for me as well! Thanks everyone!

kitsunekyo commented on Dec 11, 2016

i've looked for a fix for over 2 hours now. @MrFroop's solution also worked for me.

i uninstalled tmux, updated babun via update.bat and then reinstalled tmux. absolutely no configuration needed for it to work then.

thanks a lot. hope babun update will be fixed soon

python installed from pact fail! #729

Open

andromedian commented on Jan 2, 2017

I will try this but previously I just installed python and ruby via windows and created alias command. I don't really like that hack but it worked for me until @chanux directed me here.

panderan commented on Jan 24, 2017

I have met the same problem. My md5 check of tmux is a4e4dec5c86ac2ca2dbb4c55f204eb07, it not work with my babun. And I try to got the source files of tmux from GitHub, and built it from source by myself, Then it worked well. So I believe this version of tmux is problem. Sorry for my poor English.

jchoffmann commented on Jun 26, 2017

Found an existing issue raised for the `babun update` problem, however it doesn't get much attention: [#516](#)

Odd as this is mentioned explicitly as a feature in the `README.adoc`

pact install Python3 done,but Can not run it. #796

🔔 Open

jbeck695 commented on Oct 10, 2017

just to clarify--
babun update
doesn't fix issue, but manually running
`\update.bat`
does fix it. This will run for a few mins, calls cygwin's `setup*.exe`
Thx Mr Froop!

jbeck695 commented on Oct 10, 2017

manually running "`\update.bat`"
does trick...web editor foo bar'd last post

jbeck695 commented on Oct 10, 2017

dolp! ok I don't post enough...

morriscalp commented on Oct 25, 2017

I was having a similar issue with some other programs (screen, xmllint) -- including the strace error message mentioned above -- and running `update.bat` manually solved this. So it does appear that there is some problem with `babun update`.

error 127 for tmux on fresh installation #811

🔔 Open

cnsimo commented on Jan 31

My issue like [#720](#) has solved by the following:

- Remove `tmux`
- Run `update.dat`
- Reboot the machine
- Install `tmux`

It may be caused that the version of `cygwin` isn't `2.9.0`.
